## Personal Statement

---

Ever since I got to know the world of web development, I fell in love with the ability to impact people through the applications I helped to develop. So I decided go to college and specialize into this subject. I always care about the user experience and I am passionate about developing charming and minimalist screens.

## Projects

---

### Sabor com Amor ([View project](#))

(April 2023 - May 2023)

Freelancer

- A friend's mom sells artisan foods and wanted an easier way to share and showcase her work and products. So I decided to create a landing page that serves as a menu and presentation of how her "shop" works. To develop this application I used NextJs, TypeScript and Tailwind.

### MyMovieDB ([View project](#))

(February 2023 - March 2023)

Freelancer

- This application is a web-based simulation of the popular movie database website IMDb. People can search for movies or tvshows. The project also has search filters, such as top 100 best movies, genres, latest releases, etc. For this project I used ReactJs, TypeScript, Tailwind and Context API for data management.

### Pomodoro App ([View project](#))

(February 2023)

Freelancer

- Since I was a high school student, I used to use the pomodoro technique to study. So I noticed that my friends also used this technique, and decided to start this project. It's a simple way to manage your time while you study and be more productive. As always, I wanted to bring a delightful interface and also help some friends with this project. The technologies used were: ReactJs, TypeScript and Tailwind.

## Education

---

### Instituto Federal de São Paulo (IFSP)

(January 2022 - Present)

Technologist in Systems Analysis and Development

## Skills

- HTML
- CSS
- JavaScript / TypeScript
- ReactJs
- NextJs
